

Advance Concrete 2012 SP2 and AutoCAD 2013 compliant version

This document describes the improvements in **AutoCAD 2013 compliant version** and **Service Pack 2** for **Advance Concrete 2012**.

General

The main target for this version is the compatibility of **Advance Concrete** with **AutoCAD 2013** and **AutoCAD Architecture 2013**. This version is not a service pack as usual. It is a full setup version, because of the major changes in the AutoCAD 2013 release.

Additional improvements:

- Drawing properties: Cannot click OK while editing hatch by material
- Drawing properties: Cannot edit sections perpendicular to a grid, once after an update was done
- Performance: Memory overwrite when multiple traces per object
- Reinforcement symbols: <TotalQuantityDrawing> counts definitions hidden by 3d power
- [7935] - Reinforcement: Different bar marks assigned to nearly identical bars
- [7904] - Drawings / Bottom view: Hidden object hatches assigned to wrong object

Note:

The number in brackets [xxx] is the GRAITEC Helpdesk reference.
