

Advance Steel 2011 SP1 – HotFix1

The update solves the following issues:

- [4319] Fixes a "Command in progress" error that might occur in certain conditions while using orbit in shade mode.
- [4036] Undo a behavior change of the "POS_NUM" attribute from Advance Steel 2011 SP1.
- [5032] Corrects POSNUM token behavior when used in the process filename selector.
- [4850] Fixes an application freeze after a drawing update caused by a detail modification.
- [4808] BOM units on customer template depend on windows regional settings.
- [5077] Corrects a stability problem with multi user functionality on AutoCAD 2009.
