UPDATES	4
CORRECTIONS	4

The 2019 R2 version of GRAITEC Advance PowerPack for Revit® introduces various important updates and corrections which are listed here below.

Updates

- The add-on can be installed without uninstalling the previous version;
- Users are now able to close and save the file with a section box opened (*Work item 1206: Section Box causes Revit to crash*);
- The section box can be used immediately after opening the file if it was created using PowerPack for Revit (*Work item 1239 - Section Box button gets unchecked after closing and reopening the file*);
- **Pipe Openings** tool now works for linked models (*Work item 1208: Pipe Openings tool isn't working properly with linked models in Revit 2019*);
- The user is now able to set a path for pipe and duct systems numbering (*Work item 1210: Numbering – the module stops working when trying set a user path for pipe/duct systems*);
- The **Numbering** feature is now able to add text using any **Identity Data** field available in Revit® (*Work item 1258: Numbering – When trying to number with parameters other than "Mark" an error is displayed*).

Corrections

- The settings for the X, Y and Z axes for Section Box can now be used correctly (*Work item 1207: Section Box default settings are not working properly*);
- The **Windows** function can now rearrange the user's views again (*Work item 1215: Windows - function commands are not working as expected*).
