

# Advance – Concrete 6.1 SP5 List of improvements

[www.graitec.com](http://www.graitec.com)

## MODEL

### Slabs – Slab symbol

→ Slab shadowed symbol is displayed correctly on the circular slab openings with large coordinates.

## DRAWINGS

### Bottom-up views – Circular columns hatch color

→ Small correction in bottom-up views representation: the circular columns are represented in the chosen hatch color.

### Bottom-up views – View finishing

→ Small correction in bottom-up views representation: the internal lines are colored correctly according to the view finishing settings.

### Views – Hatch display order

→ The hatch display order in calculated views has been corrected so that the solid hatches do not cover the drafting elements (axes, dimensions, annotations) after a view update.

### Hatch plotting

→ Hatches from the calculated views can be plotted when layer 0 is unplottable.

### Exponent for millimeters

→ The millimeters can be displayed at exponent on dimensions with text override containing brackets.
