

**ADVANCE Design 2011  
SP2  
What's new**

[www.graitec.com](http://www.graitec.com)

This service pack for ADVANCE Design 2011 fixes two important issues regarding the seismic analysis:

- Defects 12836 & 12874: The seismic results become unavailable on models with a large number of Eigen modes to be calculated and the "Automatic calculation of damping values" option per model enabled.
- Defect 12843: In some cases, after the 1st calculation, the value of Axial forces on wall's torsors is not correct. When several iterations (at least two) are performed, the value becomes correct. This problem is due to a bad initialization of a variable at the beginning of the 1<sup>st</sup> calculation.

This service pack is incremental and must be installed on Advance Design 2011 SP1.
