

Autodesk Advance Steel 2015 / HotFix 2

This document describes the improvements in **Autodesk Advance Steel 2015 HotFix 2**.
The hotfix needs to be installed over your current **Autodesk Advance Steel 2015** version.

GENERAL

This hotfix includes a few useful improvements for the situations where an unexpected close of the program would occur. Those situations will be avoided when:

- Using the "Update labels" tool, available in Document Manager, to bring your details up-to-date;
- Changing the height of levels created within Project Explorer that have structural elements assigned to them;
- Using Project Explorer queries for camera objects;
- Trying to apply the "Shorten" feature on ACIS solids;
- Launching multiple instances of Autodesk Advance Steel at the same time;
- Customizing the "Chamfered cut" properties for plate features, on machines using the Windows 8 operating system.
