Welcome to GRAITEC PowerPack for Revit 2022.1.1

GRAITEC is pleased to present the new version of Advance PowerPack for Revit 2022.1.1, part of the Graitec Advance Suite. This hotfix contains one specific correction regarding one command of the Powerpack, the Quick Dimension tool.

After this hotfix is applied successfully, the build number of the version will be 917.

This document contains the description of what has been solved.

Compliance with Revit® 2021 and Revit® 2022

PowerPack for Revit 2022.1.1 is compatible with the latest Revit versions: Autodesk Revit® 2021 and Autodesk Revit® 2022. Previous versions of Revit are not supported.

Quick Dimension

One of the new features of the 2022 major release was the enhancement of the Quick Dimension command. However, in some special cases, using this command could generate an error message, especially on a model with hidden elements or categories.

This is now resolved in this version.
