1. Welcome to Graitec Powerpack for Revit 2023.1.2 Hot Fix

We are pleased to inform you the GRAITEC's recent release of a Hot Fix for PowerPack for Revit, regarding the Export to GTCX feature in BIM Connect. This latest development is designed to address a critical fatal error that was attributed to a recent Windows update. We understand the significant impact this error had on our users and with this Hot Fix we remedied this issue.

2. BIM Connect

2.1. Export to GTXC and Advance Design

Due to recent changes implemented by Microsoft to the Access Database ODBC Driver, a Windows update was released causing a critical error in the export functionality of BIM Connect's PowerPack. This problem has not only impacted our software but also affected other software vendors in the industry.

To resolve this problem, we have implemented a solution for the export to GTXC feature. We have replaced the problematic ODBC driver with GRAITEC's own ODBC driver. This update guarantees that the issue will no longer arise when exporting to Advance Design.
